

WETMIX® Mini

Mortar Mixer
for Mini Silo Applications

quick return on
investment

Wetmix® Mini is a continuous single-shaft horizontal mixer with a chamber completely lined with wear proof SINT® engineering polymer.

Fitted under a very small building site silo (1-2 m³), it is used for the preparation of premixed mortars or plasters, directly on site.

It is often used in case of specialized mortars like adhesives or glues.

The use of SINT® engineering polymers ensures both longer durability of the mixing tools in comparison with traditional carbon steel equipment and extremely short cleaning time.

Benefits

- ✓ **Homogeneous wet mortar in few seconds**
- ✓ **Self cleaning machine**
- ✓ **No loss of dry material**
- ✓ **Reduction of maintenance and cleaning costs**
- ✓ **Fast return of investment**
